

HelioSense Complete Paste-Ready Prompts

Both original prompts included in full

PROMPT 1 - MAIN WEBSITE PROMPT

PASTE-READY PROMPT

Build a premium, responsive single-page website for **HelioSense**, an **AI-assisted athlete safety, environmental risk monitoring, hydration guidance, and sports academy management platform** designed for academies, coaches, athletes, and parents.

HERO

Headline: **“Protect Every Athlete. Before Risk Becomes an Emergency.”**

Sub-headline:

“HelioSense helps sports academies monitor athlete activity, UV exposure, heat risk, hydration needs, training intensity, and real-time safety alerts from one intelligent dashboard.”

Add two CTA buttons:

- Primary CTA: **“Book a Free Demo”** — scrolls to the demo/onboarding section.
- Secondary CTA: **“Explore the Platform”** — scrolls to the features section.

Include a premium dashboard-style visual showing:

- Athlete safety score
- Current UV and heat conditions
- Hydration reminders
- Active athlete sessions
- Green, orange, red, blue, and gray safety indicators
- A critical athlete risk alert popup

Add trust text below the buttons:

“Built for sports academies, coaches, athletes, and parents.”

PLATFORM FEATURES

Show HelioSense features in clean, modern feature cards.

1. Real-Time Athlete Monitoring

Monitor every athlete's current activity and session status, including:

- Training
- Sprint Drill
- Resting
- Hydrating
- Reduced Intensity
- Paused
- Session Ended
- Medical Attention
- Not in Session

Each athlete must appear in a compact, easy-to-scan card that displays:

- Athlete name and profile
- Current activity
- Live safety status
- UV exposure
- Heat-risk level
- Hydration status
- Training duration
- Current intensity
- Last recorded update

2. Intelligent Risk-Zone Alerts

Use clearly differentiated safety indicators:

- **Green:** Safe
- **Orange:** Caution
- **Red:** Critical Risk
- **Blue:** Recovery or Hydration
- **Gray:** Inactive or Not in Session

When an athlete enters a risk zone, show a visible “**Issue Raised**” indicator on the athlete card.

When an athlete reaches the critical red zone, immediately display a direct popup to the relevant coach with confirmable actions:

- Give Rest
- Hydrate
- Reduce Intensity
- Pause Athlete
- End Athlete Session
- Medical Attention

The coach’s selected action must update the athlete’s live status.

3. UV, Heat and Environmental Safety

Use the athlete’s location, date, time, weather conditions, UV index, and environmental data to provide:

- Current UV-risk level
- Heat-stress warnings
- Safer outdoor training recommendations
- High-risk training-hour alerts
- Recommended break intervals
- Hydration guidance
- Sunscreen and protective-equipment reminders

4. Hydration Guidance

Provide personalized hydration recommendations based on:

- Environmental temperature
- UV exposure
- Session duration
- Training intensity
- Athlete status
- Previous hydration activity

Allow coaches to mark an athlete as **Hydrating** and record hydration actions during a session.

5. Coach Dashboard

The Coach Dashboard should allow coaches to:

- View assigned athletes
- Start, pause, and end sessions
- Monitor athlete status in real time
- Receive risk alerts
- Confirm safety actions
- Record rest and hydration
- Reduce training intensity
- Escalate an athlete for medical attention
- Review session history and safety incidents

6. Academy Owner Dashboard

The Academy Owner Dashboard should provide:

- Overview of all athletes and coaches
- Academy-wide risk summary
- Active sessions
- Current environmental conditions
- Athlete attendance
- Safety incidents
- Coach response history
- Parent subscriptions
- Academy performance analytics
- Athlete health and safety reports

The Athlete section must be accessible from both the **Coach Dashboard** and the **Academy Owner Dashboard**.

7. Parent Monitoring

Provide parents with a simplified mobile-friendly view showing:

- Child's current session status
- Training start and end time
- Hydration updates
- Rest or reduced-intensity actions
- Important safety alerts
- Session completion status

- Basic safety and activity summary
-

PRICING

Create a premium pricing section with the following structure:

Academy Plan

Custom Pricing

For sports academies that need athlete monitoring, coach dashboards, alerts, environmental safety recommendations, and academy analytics.

Include:

- Academy Owner Dashboard
- Coach Dashboard
- Athlete Management
- Live Session Monitoring
- UV and Heat-Risk Alerts
- Hydration Guidance
- Critical-Risk Popups
- Safety Reports
- Parent Connectivity
- Support and Onboarding

CTA: **“Request Academy Pricing”**

Parent Safety Plan

₹199 per month per athlete

This plan is compulsory for parents whose child is enrolled in a HelioSense-enabled academy.

Include:

- Child Session Updates

- Hydration and Rest Updates
- Safety Alerts
- Session Completion Notifications
- Parent Safety Dashboard
- Athlete Activity Summary

CTA: “**Activate Parent Access**”

Add a note:

“Academy pricing may depend on the number of athletes, coaches, locations, and selected monitoring features.”

Do not invent additional fixed prices unless they are entered later through the admin panel.

DEMO AND ACADEMY ONBOARDING

Instead of a normal appointment-booking system, add a **Book a Free Demo** section.

The academy representative should be able to enter:

- Full Name
- Academy Name
- Role
- Phone Number
- Email Address
- City
- Number of Athletes
- Number of Coaches
- Sports Offered
- Preferred Demo Date
- Preferred Time Slot
- Additional Requirements

Show available demo slots for the next 14 days.

After selecting a slot:

- Confirm the demo request

- Show a confirmation screen
- Send a confirmation email
- Display the selected date and time
- Provide an option to add the demo to Google Calendar
- Notify the HelioSense team about the new request

Use Indian Standard Time by default.

PAYMENT

For the Parent Safety Plan, collect the **₹199 monthly subscription payment** using:

- UPI
- Razorpay
- Debit/Credit Card
- Net Banking

For academy subscriptions, allow payment only after the academy receives an approved quotation or onboarding plan.

After successful payment:

- Show a payment confirmation screen
- Generate a receipt
- Send a confirmation email
- Activate the relevant account
- Display the subscription renewal date
- Allow the user to view payment history

Do not claim that payment is successful until it has been verified by the payment gateway.

TRUST AND SAFETY SECTION

Headline: **“Designed Around Athlete Safety and Faster Coach Response.”**

Show these benefits:

Early Risk Detection

HelioSense helps coaches identify rising UV, heat, hydration, and training-intensity risks before they become critical.

Immediate Coach Actions

Critical alerts provide clear, confirmable actions instead of showing only passive warnings.

Connected Academy Ecosystem

Academy owners, coaches, athletes, and parents receive the information relevant to their responsibilities.

Include trust indicators such as:

- Real-Time Monitoring
- Role-Based Access
- Secure Athlete Data
- Coach-Confirmed Safety Actions
- Transparent Parent Updates
- Session and Incident History

Add this proof statement:

“Every critical alert is connected to a visible athlete status, coach response, and recorded safety action.”

Do not add fake client logos, fake testimonials, fake user counts, or unsupported medical claims.

Include a disclaimer:

“HelioSense is an athlete safety and decision-support platform. It does not replace professional medical diagnosis, emergency services, or qualified medical supervision.”

HOW IT WORKS

Create a simple five-step section:

1. **Academy Onboards**

The academy creates its profile, adds coaches, and registers athletes.

2. **Coach Starts a Session**

The coach selects participating athletes and records the training activity.

3. **HelioSense Evaluates Risk**

The platform evaluates environmental conditions, athlete activity, session duration, hydration, and training intensity.

4. **Coach Receives Actionable Alerts**

Coaches receive caution or critical alerts with clear response options.

5. **Parents and Academy Owners Stay Updated**

Relevant safety actions and session summaries become available to authorized users.

DESIGN

Use the finalized HelioSense visual system.

Brand Palette

- Light background: **#D0EFF0**
- Dark navy: **#1E3D59**
- Deep teal: **#006D77**
- Bright teal accent: **#33A4A9**

Use a more saturated **#D0EFF0-tinted background at approximately 80% visual strength**, rather than an almost-white background.

Use:

- **#1E3D59** for the navigation, footer, dark sections, and strong headings
- **#006D77** for primary buttons and important interface elements
- **#33A4A9** for highlights, active elements, charts, borders, and hover states
- Slightly darker athlete cards for better separation from the page background

Maintain clearly differentiated status colors:

- Green for safe
- Orange for caution
- Red for critical
- Blue for hydration or recovery
- Gray for inactive

Typography:

- **Ubuntu** for major headings
- **Inter** for body text, forms, buttons, tables, navigation, and dashboard elements

Design style:

- Premium sports-technology interface
- Clean and trustworthy
- Mobile-first
- Responsive on desktop, tablet, and phone
- Rounded but professional cards
- Subtle shadows and borders
- Smooth scrolling
- Clear visual hierarchy
- Accessible contrast
- Lightweight animations
- No excessive gradients
- No generic medical-stock imagery
- No childish design elements

The website should visually communicate **safety, intelligence, speed, control, and trust**.

CONTACT

Create a footer containing:

- HelioSense logo
- Short description
- Email address
- Phone number
- Delhi NCR, India
- Business hours
- Privacy Policy
- Terms and Conditions
- Data Protection Policy
- Refund and Cancellation Policy
- Contact Support
- Social media links

Add a map showing the operational region only after an official business address is provided.

Until real contact details are provided, use editable placeholders rather than invented information:

- **Email:** [Official HelioSense Email]
- **Phone:** [Official Phone Number]
- **Address:** [Official Business Address]
- **Hours:** [Business Hours]

TECHNICAL REQUIREMENTS

- Build it as a fast, responsive single-page website.
- Use reusable components.
- Add smooth navigation between sections.
- Validate all forms.
- Show loading, success, and error states.
- Protect user and athlete data.
- Use role-based authentication for Academy Owner, Coach, Parent, and Athlete accounts.
- Do not expose private athlete data publicly.
- Make all buttons and forms functional.
- Integrate real APIs only when valid API credentials are provided.
- Do not use fake live data without clearly labeling it as demo data.
- Optimize the website for performance, accessibility, SEO, and mobile devices.
- Add a sticky navigation bar with links to Features, How It Works, Pricing, Safety, Demo, and Contact.

PROMPT 2 - ADDITIONAL / REPLACEMENT SECTIONS

Add these sections to the previous **HelioSense paste-ready prompt**, replacing the earlier demo confirmation, payment, trust, about, FAQ, contact, and technical sections where they overlap:

DEMO BOOKING CONFIRMATION

After the academy representative selects a demo date and time, show a complete booking-summary screen containing:

- Representative's name
- Academy name
- Phone number
- Email address
- City
- Number of athletes
- Number of coaches
- Selected sports
- Preferred demo date
- Preferred time
- Additional requirements

Add a primary button labelled:

“Confirm Demo Booking”

On successful confirmation, show a polished confirmation screen with:

- Booking reference number
- Confirmed demo date and time
- Academy name
- Contact details
- Meeting format
- Next steps
- HelioSense support contact

Add these actions:

- **Add to Google Calendar**
- **Send Details on WhatsApp**

- **Email Confirmation**
- **Edit Booking**

The “**Send Details on WhatsApp**” button should open a pre-filled WhatsApp message addressed to the official HelioSense business number.

Suggested WhatsApp message:

Hello HelioSense, I have booked a product demo for [Academy Name] on [Date] at [Time]. My name is [Name], and my contact number is [Phone Number]. Please confirm the booking.

Until an official WhatsApp number is provided, use an editable placeholder:

[Official HelioSense WhatsApp Number]

Store demo-booking information temporarily in the browser so the entire booking flow remains functional during the prototype stage. Clearly label prototype bookings as demo data when no backend is connected.

PAYMENT

Integrate a subscription-payment flow for the **₹199 monthly Parent Safety Plan**.

Support:

- UPI
- Razorpay
- Debit Card
- Credit Card
- Net Banking

For the initial prototype, create a realistic mock-payment flow if a live payment gateway is not connected.

The flow should include:

6. Parent selects the athlete.
7. Parent reviews the ₹199 monthly plan.
8. Parent enters billing and contact details.

9. Parent chooses a payment method.
10. A secure-looking payment modal appears.
11. A mock payment can be completed successfully or intentionally failed for testing.
12. The user receives a clear success, failure, pending, or cancelled state.

On successful payment, show:

- Payment-success confirmation
- Transaction reference
- Athlete name
- Parent name
- Amount paid
- Subscription start date
- Next renewal date
- Payment method
- Download Receipt button
- Go to Parent Dashboard button

Send a confirmation email only when an actual email service is connected.

For academy subscriptions:

- Do not provide a public instant-checkout flow.
- Allow the academy to request a quotation.
- Let the HelioSense team approve the academy plan.
- Generate a payment link or invoice only after approval.
- Show quotation status as Requested, Under Review, Approved, Rejected, or Payment Pending.

Build the complete payment interface so it can later connect easily to Razorpay or another supported payment gateway.

Always display prices in ₹ INR.

Never show a payment as successful until a verified gateway response has been received. During prototype mode, clearly mark the transaction as:

“Demo Payment — No real money charged.”

TRUST AND CREDIBILITY SECTION

Do not use fake star ratings, fake review counts, fake academies, fabricated testimonials, or unsupported adoption numbers.

Instead, build a credible trust section around product capabilities.

Headline:

“Built to Help Coaches Respond Before Athlete Risk Escalates.”

Show the following trust indicators:

- Real-time athlete status monitoring
- UV and heat-risk awareness
- Hydration and recovery tracking
- Confirmable coach actions
- Parent session updates
- Recorded incident history
- Role-based platform access
- Secure athlete information
- Transparent session records
- Academy-level safety insights

Add three short testimonial placeholders that can later be replaced with verified customer feedback.

Testimonial Placeholder 1

Academy Owner

“Add verified academy-owner feedback here after the HelioSense pilot programme.”

Testimonial Placeholder 2

Coach

“Add verified coach feedback here after real-world session testing.”

Testimonial Placeholder 3

Parent

“Add verified parent feedback here after parent-dashboard onboarding.”

Clearly label all placeholder testimonials as:

“Pilot testimonial placeholder — not a real customer review.”

Add a visual product-proof area containing:

- Coach Dashboard preview
- Athlete safety-card preview
- Critical-risk popup preview
- Parent update preview
- Academy analytics preview

Use demo dashboard screenshots or interface mockups instead of unrelated stock photographs.

Add a comparison slider showing:

Before HelioSense

- Coaches manually track athlete condition
- Environmental risks are checked separately
- Safety actions may not be recorded
- Parents receive limited session visibility
- Incident data remains fragmented

With HelioSense

- Athlete status appears in one dashboard
- UV, heat, hydration, and session risks are combined
- Coach actions are recorded
- Parents receive relevant updates
- Academy owners can review safety patterns

Do not use athlete injury photographs or misleading medical before-and-after images.

ABOUT HELIOSENSE

Headline:

“A Smarter Safety Layer for Modern Sports Academies.”

Write a warm, human introduction rather than a generic corporate description.

Suggested copy:

“HelioSense is being created to solve a simple but important problem: during outdoor and high-intensity training, a coach cannot continuously calculate every athlete’s UV exposure, heat risk, hydration requirement, training duration, recovery status, and emerging safety concern at the same time. HelioSense brings those signals into one clear platform so coaches can make faster and better-informed decisions.”

Add a founder section with editable placeholders:

- Founder photograph
- Founder name
- Founder role
- Short founder story
- Product motivation
- Contact or LinkedIn link

Until official founder details are finalized, use:

- **Founder:** [Founder Name]
- **Role:** Founder, HelioSense
- **Bio:** [Add the verified HelioSense founder story here]
- **Photo:** [Founder Photo Placeholder]

Add a small product-principles section:

Prevention Before Reaction

Surface developing risk before it becomes a serious incident.

Coaches Stay in Control

HelioSense provides decision support; the coach confirms the final action.

Relevant Information for Every Role

Academy owners, coaches, athletes, and parents see only the information relevant to them.

Safety Without Complexity

Critical information must be understandable within seconds during an active training session.

Avoid describing HelioSense as a hospital, medical-diagnosis tool, wearable manufacturer, or emergency-response replacement.

FAQ SECTION

Add an accordion-style FAQ section with the following questions and answers.

What is HelioSense?

HelioSense is an athlete-safety and academy-management platform that helps coaches monitor athlete activity, environmental conditions, hydration status, session duration, and emerging safety risks.

Is HelioSense a medical device?

No. HelioSense is a safety and decision-support platform. It does not provide medical diagnosis and does not replace qualified healthcare professionals or emergency services.

Do athletes need to carry a phone during training?

Not necessarily. Coaches can manage active sessions and athlete statuses through the Coach Dashboard. Future hardware or wearable integrations may provide additional data where available.

How does HelioSense calculate athlete risk?

The platform can evaluate available information such as UV level, environmental heat, session duration, training intensity, hydration activity, athlete status, and coach-entered observations. The exact model depends on the data sources connected to the platform.

What happens when an athlete enters a critical-risk zone?

The athlete card displays a critical alert, and the assigned coach receives a direct popup with actions such as Give Rest, Hydrate, Reduce Intensity, Pause Athlete, End Session, or Medical Attention.

Can the coach override a recommendation?

Yes. HelioSense supports the coach's decision-making but does not replace the coach's judgment. The selected action should be recorded in the athlete's session history.

Can parents see all academy and athlete data?

No. Parents should only see authorized information related to their own child, such as session status, important safety actions, hydration updates, and session completion.

Can academy owners access the Athlete section?

Yes. The Athlete section must be available to both authorized coaches and academy owners, with permissions based on their roles.

How much does the Parent Safety Plan cost?

The current planned Parent Safety Plan is **₹199 per month per athlete**.

Is the parent plan compulsory?

The planned business model requires the parent plan for athletes enrolled through a HelioSense-enabled academy. This rule should be clearly communicated during academy onboarding and parent registration.

How much does the academy plan cost?

Academy pricing is customized according to the number of athletes, coaches, branches, and required platform features.

Can an academy book a free demo?

Yes. Academies can select an available demo slot for the next 14 days and submit their academy details through the website.

Are payments taken directly on the website?

The parent subscription can be connected to Razorpay, UPI, cards, and net banking. Academy payments should be collected only after quotation approval.

Is athlete data secure?

The production platform must use secure authentication, role-based permissions, encrypted communication, protected databases, access logs, and appropriate data-retention policies.

Does HelioSense work without live sensor integrations?

The prototype may use coach-entered data and external environmental APIs. More advanced athlete readings require compatible sensor, wearable, or hardware integrations.

Can HelioSense guarantee that no athlete will face an emergency?

No system can guarantee that. HelioSense is intended to improve awareness, consistency, documentation, and response speed, but it cannot eliminate every risk.

CONTACT AND FOOTER

Create a detailed contact section for academies, coaches, parents, and potential partners.

Include a contact form with:

- Full Name

- Organization or Academy Name
- Role
- Email Address
- Phone Number
- City
- Subject
- Message
- Preferred Contact Method
- Consent checkbox

Contact categories:

- Book a Demo
- Academy Pricing
- Parent Subscription
- Technical Support
- Partnership
- Data and Privacy
- General Enquiry

Add:

- Click-to-call button
- Click-to-email button
- WhatsApp button
- Business hours
- Operational region
- Social media links
- LinkedIn link
- Support link

Use editable placeholders:

- **Email:** [Official HelioSense Email]
- **Phone:** [Official HelioSense Phone Number]
- **WhatsApp:** [Official HelioSense WhatsApp Number]
- **Address:** [Official HelioSense Business Address]
- **Business Hours:** [Official Business Hours]
- **Operational Region:** Delhi NCR, India

Do not publish a fake full office address.

Embed Google Maps only after the official address has been confirmed. Until then, show a clean regional card labelled:

“Initial Operations: Delhi NCR, India.”

Footer links:

- Platform
- Features
- How It Works
- Pricing
- Book a Demo
- About HelioSense
- Contact
- Help and Support
- Privacy Policy
- Terms and Conditions
- Data Protection Policy
- Cookie Policy
- Refund and Cancellation Policy
- Medical and Safety Disclaimer

Footer disclaimer:

“HelioSense is an athlete-safety and decision-support platform. It does not replace professional medical assessment, emergency services, qualified supervision, or a coach’s direct observation.”

TECHNICAL AND PROTOTYPE REQUIREMENTS

Build a fully responsive, mobile-first single-page website with smooth-scroll navigation.

The website must feel like a custom-designed premium sports-technology product, not a generic AI-generated SaaS template.

The visual identity should be:

- Distinctive
- Athletic
- Safety-focused
- Data-driven
- Modern
- Professional

- Calm during normal conditions
- Urgent and unmistakable during critical alerts

Keep these interactions functional during the prototype stage:

- Navigation
- Demo-slot picker
- Demo-booking form
- Booking-summary screen
- Confirmation screen
- WhatsApp redirect
- FAQ accordions
- Pricing CTA buttons
- Contact form
- Athlete-card expansion
- Dashboard filters
- Risk-alert popup
- Coach-action buttons
- Mock parent subscription
- Mock payment success and failure states
- Mobile menu
- Form validation
- Loading states
- Empty states
- Error states
- Toast notifications

Use browser state or local storage where necessary so the demonstration works end-to-end without a backend.

Structure the code so a backend can be connected later without rebuilding the interface.

Create reusable components for:

- Navbar
- Hero
- Dashboard preview
- Feature cards
- Athlete cards
- Risk indicators
- Critical-alert modal
- Pricing cards
- Demo calendar
- Time-slot selector
- Booking summary

- Payment modal
- Trust section
- Comparison slider
- Founder section
- FAQ accordion
- Contact form
- Footer

Use sample athlete and academy information only as clearly identified demo data.

Example label:

“Demo data for interface preview.”

Do not silently present generated information as real-time athlete data.

Use proper form validation for:

- Required fields
- Email format
- Indian phone numbers
- Demo dates
- Time-slot selection
- Consent checkboxes
- Payment details
- Academy size inputs

Ensure accessibility through:

- Keyboard navigation
- Visible focus states
- Semantic HTML
- Proper form labels
- Sufficient contrast
- Accessible modals
- ARIA attributes where needed
- Screen-reader-friendly alerts
- Reduced-motion support

Optimize for:

- Desktop
- Tablet

- Mobile
- Performance
- SEO
- Accessibility
- Fast loading
- Clean reusable architecture

Use lazy loading for non-critical sections and dashboard visuals, but keep the hero and primary navigation immediately available.

Use the finalized HelioSense design system:

- **#D0EFF0** — main light background
- **#1E3D59** — dark navigation, footer, and headings
- **#006D77** — primary actions
- **#33A4A9** — active highlights and accents
- **Ubuntu** — headings
- **Inter** — body and interface text

Preserve separate semantic colours for:

- Green — Safe
- Orange — Caution
- Red — Critical
- Blue — Hydration or Recovery
- Gray — Inactive

Do not use the brand teal colour as a replacement for risk colours.

Use restrained animations:

- Smooth section reveals
- Subtle card hover
- Number transitions
- Modal entrance animation
- Alert pulse only for genuine critical states
- Smooth dashboard filtering
- Comparison-slider movement

Avoid:

- Excessive gradients
- Neon effects

- Glassmorphism everywhere
- Random stock images
- Fake testimonials
- Fake ratings
- Fake partnerships
- Fake medical claims
- Overloaded dashboards
- Decorative animations that distract from safety information

The final prototype should feel realistic and clickable from beginning to end while remaining ready for later integration with:

- Authentication backend
- Athlete database
- Weather and UV APIs
- Wearable or sensor data
- Razorpay
- Email notifications
- WhatsApp Business
- Google Calendar
- Analytics
- Role-based dashboards
- Incident-report storage
